

I'm a **UX developer** with 8 years industry experience. I've spent the last four years of my life in San Francisco building single page web applications. From an early stage start up to a publicly traded company, I have worked side-by-side with other designers, developers, product managers, and QA engineers to deliver consumer and B2B products. Now I am looking to relocate back to Seattle and join a team focused on building first class user experiences.

Points International | points.com

Nov 17, 2014 - present

My most recent experience is with Points. I joined the company to help rebuild their consumer product. My team built a responsive single page app using Angular on top of a RESTful json api built on Golang. I played a key role in developing the front end architecture and continue to strive for better tooling, better performance, and higher code quality. In addition, I'm proactively building a better engineering culture by emphasizing collaboration, experimentation and creativity.

Switchfly | switchfly.com

Jun 2013 - Nov 2014

Before that, I was at Switchfly, a B2B company that worked with American Express to build an agent desktop tool. Our app allowed travel agents to search and book hotel, air and car services. This was the largest team I've worked with on a single project, and required a very high level of detail. Unit and integration testing was an integral part of the development process and I learned the importance of code coverage, pair programming, and automation testing.

Apartment List | apartmentlist.com

Jan 2012 - Feb 2013

Apartment List was not only my first job in San Francisco, but was a proper start up experience. I joined the labs team there where we experimented with different verticals using the lead generation model. We optimized conversions and captured user behaviors using A/B testing and analytics in an effort to better understand the market. As with all start ups, I was required to wear many hats and though my title was web designer, I learned a lot of design patterns and best practices of web development.

Education

University of Washington | BFA Digital Arts & Experimental Media 2004-2009

I'm a proud Husky. I studied art and technology in college, influenced by emerging technologies in computer arts, video, and animation. I took courses in computer science, drawing, art history, digital research and the sciences.
